

# Plugin Indentation

Introduced in [Tiki24](#)

Use this [wiki plugin](#) to indent a block of wiki content at the paragraph level (such as paragraphs, tables, code blocks...) by one level. Use properly nested `{INDENT ( )}` . . . `{INDENT}` calls for further indentation.

  - [Aliases](#)

## Parameters

There are no parameters required - only the text between the `INDENT` tags is needed. Indent a block of wiki content by one level  
*Introduced in Tiki 24.*

[Go to the source code](#)

*Preferences required:* `wikiplugin_indent`

Parameters
<i>(body of plugin)</i> - Wiki content (text) that is to be indented.
<i>no parameters</i>

## Examples

### Example 1

*This code:*

Before `{INDENT()}` Between `{INDENT}` Afters

*Would produce on this site:*

Before

Between

Afters

### Example 2

Use *this code* to indent two levels:

Before `{INDENT()}` Level 1 `{INDENT()}` Level 2 `{INDENT} {INDENT}` Afters

*This produces:*

Level 1

Level 2

### **Example 3**

Do *not* use this code to indent two levels:

Before {INDENT()}Level 1{INDENT} {INDENT()}{INDENT()}Level 2{INDENT}{INDENT} Afters

This is because the browser generates a vertical gap when repeating the indentation several times, like above. The gap gets bigger with each level of indentation. This is what the browser produces when doing it like in example 3:

Before

Level 1

Level 2

Afters
