

# Plugin Subscript

Use this [wiki plugin](#) to render characters as subscript text (slightly below the regular line of text and smaller). It is the equivalent of using `<sub></sub>` tags in HTML.

## Parameters

Tiki Doc From Code error: sub not found

## Examples

### Basic Example

---

*This code,*

*Produces:*

This is regular text{SUB()}and  
this is subscript text{SUB}

This is regular font<sub>and this is subscript</sub>

---

### Example with Formatted Subscript

---

*This code,*

*Produces:*

This is regular text{SUB()}and  
this is italic subscript"{SUB}

This is regular text<sub>and this is italic subscript</sub>
