

Interactive Translation of Tiki Interface

This permits web-based, in-context translations.

The feature was added in [Tiki2](#) and underwent an overhaul in [Tiki5](#), and further improvements in [Tiki6](#) and [Tiki7](#). As of [Tiki6.1](#), this tool can't translate the strings in JavaScript functions, so you still need to edit manually the `./lang/xx/language.js` file from your xx language.

To setup interactive translation

1. Enable *Multilingual* and *Use database for translation* on the i18n/Multilingual control panel ([tiki-admin.php?page=i18n](#))
2. Give the [permission](#) `tiki_p_edit_languages` to the [group](#) that should be allowed to edit languages. If you skip this step, only admins will be able to. Please note that if you give `tiki_p_edit_languages` to regular (non-admin users), they'll only be able to translate non-admin interfaces.
3. Add the [module switch_lang](#)

To use interactive translation

1. Using the [module switch_lang](#) select the language you want to translate to
2. From `tiki-edit_languages.php` (Admin -> Edit languages), Use *Toggle interactive translation ON*.

The screenshot shows the Tiki CMS Groupware interface. At the top, the Tiki logo is visible. Below it, the main content area has a title "Edit languages". A red box highlights a button labeled "Toggle interactive translation off". To the right of this button are links for "Custom Translations" and "Upload Translations". Below the title, there's a "Language" dropdown set to "English (en)". On the left, there's a sidebar with a "Menu" section containing "Home", "Search", and "Wiki" items. Below the menu is a "Switch Language" section with a dropdown also set to "English". At the bottom of the page, there are two radio buttons: one for "Add" and one for "Edit", with "Edit" being selected. There's also a checkbox for "Show only database stored translations".

Note: You may need to add an item in a Menu or a link to "tiki-edit_languages.php".

- The tools will be enabled for your session. You will need to turn it off from the same location.
 - The tools appear as a green bar at the top of the screen
3. Navigate to the page containing the string you want to translate, or change locally if for an English website.
 4. Check the *Interactive Translation* checkbox in the green toolbar. Uncheck it when you want to continue navigating.

Log out ▾

Menu

5. Click on the string you wish to translate. A window will open displaying related strings.

The screenshot shows the Tiki homepage with the 'Interactive Translation' feature active. The 'Originale' column contains 'Tiki' and 'at'. The 'Traduzione' column contains 'Tiki|' and 'at'. There are 'Save translations' and 'Cancel' buttons at the bottom of the dialog, along with a note that changes will be applied on the next page load only.

6. Modify the strings and save the translations. Changes will appear immediately.

Selecting a string may occasionally lead to false positives being listed. The most relevant options are generally on top, but be careful when translating the text.

You should likely make sure your database & Tiki are properly setup to use UTF-8: [Understanding Encoding](#)
