## Email folders Tracker Field

Email Folder is a new Tracker field type, introduced in Tiki23, being able to hold a list of emails in flat format or IMAP folder-like structured support for Inbox/Sent/Trash folders.

Emails are currently moved to tracker items via the Webmail interface in Tiki (Cypht web interface). Cypht is used to display Tiki-stored messages and handle all relevant actions - read, reply, forward, copy, move, delete. Message can be moved to another tracker item or to an IMAP folder.

Recording of demo at October 2021 round table

# 1. Configuration

To configure the email folders tracker field, do the following: First of all you have to create a tracker. To create a tracker, proceed as follows:

- 1.1. Creation and configuration of the Tracker
- 1.1.1. Check the activation of the Trackers feature

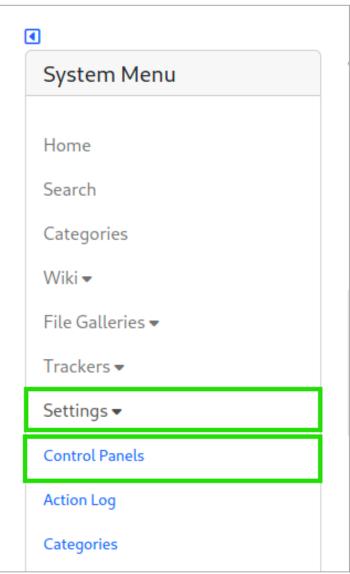

If the Tracker tab exists in the system menu go to the next point.

System Menu	
Home	
Search	
Categories	
Wiki 🗸	
File Galleries 🔻	
Trackers 🗸	
Settings 🗸	

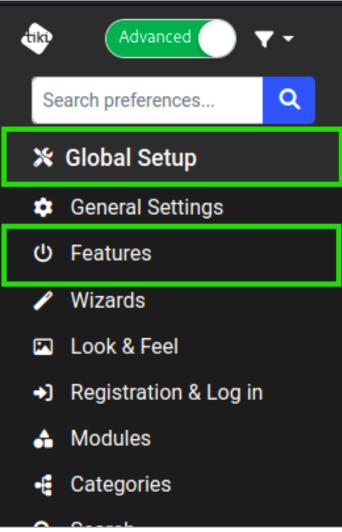

Click to expand

Otherwise if the Tracker tab does not exist, so the feature is not yet activated, you can activate it by following the following steps :

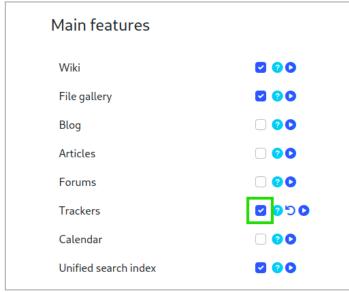

• Settings -> Control Panels

• Global Setup -> Features

• In the Main features section, check the Trackers box

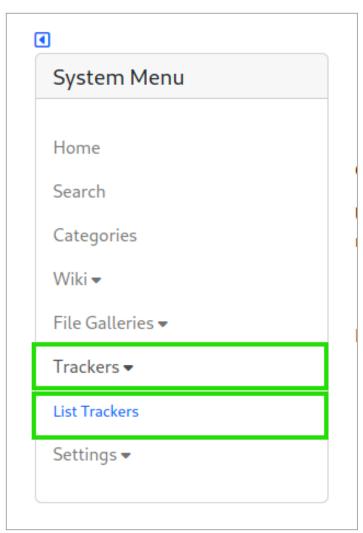

Click to expand

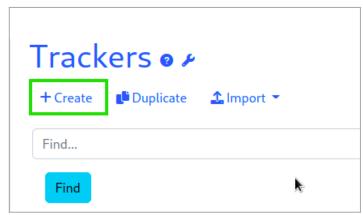

1.1.2. Create a Tracker

To create a Tracker click on:

• Trackers -> List Trackers

• Create

Click to expand

• Enter the name of the Tracker

Create Tracker ×
General
Name
Email Tracker
Description
<ul> <li>Description is wiki-parsed</li> <li>Field Prefix</li> </ul>
nametracker

• Add a description if possible

Create Tracker >	<

	Close Save

1.1.3. Add fields

Once the tracker is created. Click on :

 $\bullet\,$  the Tracker you just created

+	Create ∉Duplicate ≰Import →				
	Find	Created 🗸	Last modified	ltems	
2	Email Tracker Tracker for movement of mails	2022-11-03	07:43	0	۶
1	Clients List of all our clients. Emails associated to each client goes he	2022-10-25	2022-10-25 19:51	3	۶

Click to expand

 $\bullet\,$  then on the Field button

Click to expand The minimal configuration needs two fields:

- $\bullet$  the Text type field, which will serve as the description
- the Folder type field, which will be used to store emails

### 1.1.3.1. The Text field

Do it by clicking on:

• Add a field
