

Admin Wizard / Configuration Wizard

Starting in Tiki12, a wizard shows up for tiki admins when they first log in, enabling them to easily configure the main features of Tiki without the need to navigate through all admin panels. It was initially called "**Admin Wizard**", and renamed later to "**Configuration Wizard**"

Click to expand

Once you start the admin wizard, you will see some screens that will allow you to easily choose the basic initial configuration settings in these early stages of site set up, without the need to search them through all admin panels.

Sections

1.1.1. Set up Language

Show on admin login

Close Back Save and Continue

Set up Language

Wizard Steps

- Tiki Setup
- **Set up Language**
- Set up Date and Time
- Set up Login
- Set up Look & Feel
- Select Editor type
- Set up Wysiwyg editor
- Set up Text Area
- Set up Wiki environment
- Set up Auto TOC
- Define Categories
- Set up Structures
- Set up jCapture
- Set up File Gallery & Attachments
- Set up File storage
- Set up Main features
- Set up Search
- Set up User & Community features
- Set up some advanced options
- Set up Namespace
- Admin Wizard Completed!

Select the site language.

Language

Default language: English (en)

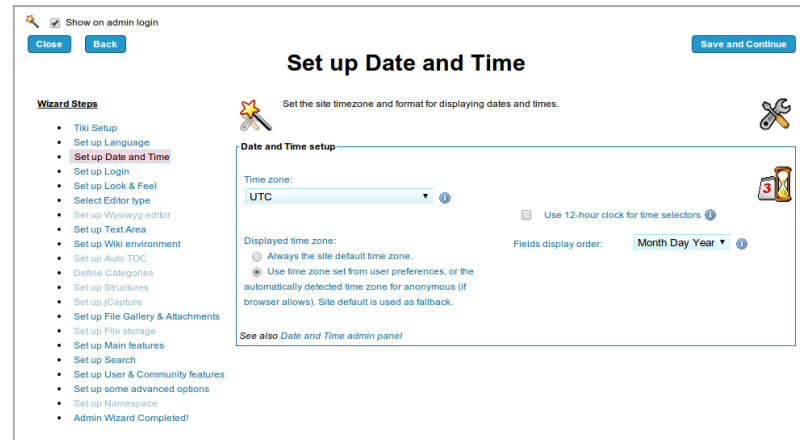

Multilingual

Use database for translation

1.1.2. Set up date and time

The screenshot shows the 'Set up Date and Time' configuration page. At the top, there are buttons for 'Close', 'Back', and 'Save and Continue'. The main heading is 'Set up Date and Time' with a subtitle 'Set the site timezone and format for displaying dates and times.' Below this is a 'Wizard Steps' sidebar with a list of tasks, where 'Set up Date and Time' is highlighted. The main content area is titled 'Date and Time setup' and contains a 'Time zone:' dropdown menu set to 'UTC', a checkbox for 'Use 12-hour clock for time selectors', and a 'Displayed time zone:' section with radio buttons for 'Always the site default time zone.' and 'Use time zone set from user preferences, or the automatically detected time zone for anonymous (if browser allows). Site default is used as fallback.' The 'Fields display order:' dropdown is set to 'Month Day Year'. A 'See also Date and Time admin panel' link is at the bottom.

Click to expand

1.1.3. Set up login

Show on admin login

Close Back Save and Continue

Set up Login

Configure the login, registration and validation preferences for the new accounts.

Wizard Steps

- Tiki Setup
- Set up Language
- Set up Date and Time
- Set up Login
- Set up Look & Feel
- Select Editor type
- Set up Wysiwyg editor
- Set up Text Area
- Set up Wiki environment
- Set up Auto TOC
- Define Categories
- Set up Structures
- Set up JCapture
- Set up File Gallery & Attachments
- Set up File storage
- Set up Main features
- Set up Search
- Set up User & Community features
- Set up some advanced options
- Set up Namespace
- Admin Wizard Completed!

Registration & Log in options

- Users can register
- Validate new user registrations by email
- Require validation by Admin
- Banning system
- Require passcode to register

Username

- Use email as username
- Force lowercase

Password

- Forgot password
- Users can change their password

Minimum length: 5

1.1.5. Set up Editor Type

Show on admin login

Close Back Save and Continue

Select Editor type

Select editor type.

Select editor type

- Only Plain Text Editor (Disable Wysiwyg)
Use only the plain text editor, which is the most stable editor mode and most compatible with Tiki functionality. The Full Wysiwyg Editor will be disabled, but you will still be able to insert wysiwyg sections through the Plain Text editor with [Plugin Wysiwyg](#).
- Wysiwyg
Use a What You See is What You Get (Wysiwyg) editor, by default in all new pages or only in some when selected. Provides a visual interface preferred by many. You will be able to configure the Full Wysiwyg Editor options in a next wizard page.

Wizard Steps

- Tiki Setup
- Set up Language
- Set up Date and Time
- Set up Login
- Set up Look & Feel
- **Select Editor type**
- Set up Wysiwyg editor
- Set up Text Area
- Set up Wiki environment
- Set up Auto TOC
- Define Categories
- Set up Structures
- Set up JCapture
- Set up File Gallery & Attachments
- Set up File storage
- Set up Main features
- Set up Search
- Set up User & Community features
- Set up some advanced options
- Set up Namespace
- Admin Wizard Completed!

Click to expand

1.1.6. Set up Wysiwyg editor

Show on admin login

Close Back Save and Continue

Set up Wysiwyg editor

You can choose to use by default the 'Compatible' Wiki mode (content is saved in wiki syntax), or the HTML mode.

Wizard Steps

- Tiki Setup
- Set up Language
- Set up Date and Time
- Set up Login
- Set up Look & Feel
- Select Editor type
- **Set up Wysiwyg editor**
- Set up Text Area
- Set up Wiki environment
- Set up Auto TOC
- Define Categories
- Set up Structures
- Set up JCapture
- Set up File Gallery & Attachments
- Set up File storage
- Set up Main features
- Set up Search
- Set up User & Community features
- Set up some advanced options
- Set up Namespace
- Admin Wizard Completed!

Wysiwyg editor setup

Select the Wysiwyg editor mode

Compatible Wiki mode

Use wiki syntax for saved pages.
This is the most compatible with Tiki functionality and the most stable editor mode.
Tools and functions in the editor toolbar will be limited.

Full Wysiwyg Editor is displayed by default

HTML mode

Use HTML syntax for saved pages.
Best compatibility with inline editing. Loses some wiki related features, such as SlideShow, and has some problems with SEFURL.
Full editor toolbar.

Full Wysiwyg Editor is optional

Inline Wysiwyg editor

 Structures organize a group of wiki pages into a tree or book that can be easily navigated by users. 

 Creating a structure is the fastest method for creating multiple pages at once. It's a great way to make a book, as well as to allow users to create new pages that will be automatically found in a common table of contents. New pages can inherit permissions from the structure homepage.

Structures options

<input checked="" type="checkbox"/> Open page as structure ?	<input checked="" type="checkbox"/> Make structure from page ?
<input checked="" type="checkbox"/> Categorize structure pages together ?	<input checked="" type="checkbox"/> MultiPrint ?
<input type="checkbox"/> Pages not in structure ?	<input type="checkbox"/> Disable inherited direct object permissions ?

Set up Namespace

Admin Wizard - steps:

- Tiki Setup
- Set up Language
- Set up Date and Time
- Set up Login
- Set up Look & Feel
- Select Editor type
- Set up Wysiwyg editor
- Set up Text Area
- Set up Wiki environment
- Set up Auto TOC
- Define Categories
- Set up Structures
- Set up JCapture
- Set up File Gallery & Attachments
- Set up File storage
- Set up Main features
- Set up Search
- Set up User & Community features
- Set up some advanced options
- **Set up Namespace**
- Admin Wizard Completed!

The namespace separator should not

- contain any of the characters not allowed in wiki page names, typically `?#@!$%+<=>`
- conflict with wiki syntax tagging

Namespace settings

Namespace separator:

Hide namespace indicator in structure path

Settings that may be affected by the namespace separator:

To use `::` as a separator, you should also use `:::` as the wiki center tag syntax.
Note: a conversion of `::` to `:::` for existing pages must be done manually

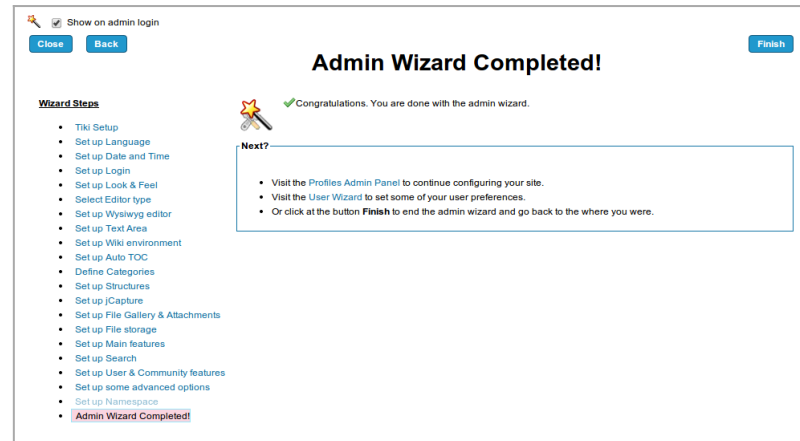

Center text using `:::` instead of `::`

Page name display stripper:
