

What is security.txt file?

`security.txt` is an accepted standard for website security information that allows security researchers to report security vulnerabilities easily.

For more information please check <https://en.wikipedia.org/wiki/Security.txt>.
It has been introduced to Tiki in https://gitlab.com/tikiwiki/tiki/-/merge_requests/7832.

How to create security.txt

`security.txt` file requires `.well-known` folder to be available at the root of your project directory.

To create `security.txt` file in Tiki, use the console command below. Different options are explained in detail in the merge request.

```
php console.php security:generate --admin-contact="tel:+1 800-555-0100" --expires=365 --  
encryption="https://example.com/pgp/my-key.gpg" --signature-path="~/.gnupg/key.asc"
```
