Installing Tiki in a sub-directory

The idea situation is to install your Tiki instance to serve the root of a domain or sub-domain

- example.org/tiki-index_raw.php
- wiki.example.org/tiki-index_raw.php

Installing in a sub-directory like this

- example.org/wiki/tiki-index_raw.php

Things to watch out for:

- Review your settings for CalDAV and CardDAV.
