

Integrator Details

Requirements

1. In `php.ini` `track_errors` should be `On` to be able to show integration error messages in a convenient way (`-$php_errormsg+` - PHP variable used).

`;$php_errormsg` (boolean). `track_errors = On`

2. `tiki_p_view_integrator` (see general permissions) needed to view configured repositories
3. `tiki_p_admin_integrator` (see general permissions) needed to configure repositories and rules
