

OCRÂ Indexing

Since Tiki20, file galleries can index the contents of files with images uploaded to Tiki, by means of "Optical Character Recognition" (OCR), and take the result to feed the search index also.

Tiki relies on <https://github.com/tesseract-ocr/tesseract> so you need to install as per <https://tesseract-ocr.github.io/tessdoc/Installation.html>

If you are using WikiSuite, Tesseract is installed by default:

<https://wikisuite.org/Differences-between-Virtualmin-and-WikiSuite>

Server Check helps you confirm that Tesseract is working well, and available to Tiki.
