

PDF.js viewer

PDF.js is a Portable Document Format (PDF) viewer that is built with HTML5, is community-driven and supported by Mozilla.

Starting in Tiki19

It's used to view a PDF through the browser, without the need to download the file via the Plugin MediaPlayer.

In order to make it work you first need to install **npm-asset/pdfjs-dist-viewer-min** from **Control Pannels >package** menu.

So, to active the feature, go to **Control Control pannels >File Galleries >Enhancements**, or you can search for **fgal_pdfjs_feature** or **pdfjs**.

Please see PluginMediaPlayer for more.
