Plugin Figlet

Introduced in Tiki 24.0

Use this wiki plugin to create FIGlets. A FIGlet text is a string, which is represented as ASCII art. FIGlet uses a special font format, called FLT (FigLet Font). By default, one standard font is shipped with the plugin. You have the option to define the maximum width of the output string and a font path.

BASIC USAGE

To display a text as a FIGlet provide a string and optionally a font. The text will then be displayed formatted as FIGlet (See example below).

PARAMETERS

Generate FIGlet text banners
Introduced in Tiki 24.
Go to the source code
Preferences required: wikiplugin_figlet

Parameters	Accepted Values

(body of plugin)

Description

Content

Default   Since

`font`   text

`width`   int

Path to "fif" font file. Find more fonts here
http://www.figlet.org/fontdb.cgi

Defines the maximum width of the output string in characters.

EXAMPLE

This code:

{FIGLET()} TIKIWIKI {FIGLET}

Would produce:
