

# Plugin Markdown

*Introduced in Tiki20*

Use this wiki plugin to parse a page content using Markdown syntax.

CommonMark flavor of Markdown was used for the implementation. See <https://commonmark.thephpleague.com/>

Coming to Tiki25 and much improved in Tiki26: Tiki-Flavored Markdown

## Parameters

Parse the body of the plugin using a Markdown parser.

*Introduced in Tiki 20.*

[Go to the source code](#)

*Preferences required: wikiplugin\_markdown*

---

### Parameters

*'body of plugin)* - Markdown syntax to be parsed

*no parameters*

---

# Examples

# Example 1

*This code:*

```
{MARKDOWN()} # This is an h1 tag ## This is an h2 tag ##### This is an h6 tag *This text will be italic* (hard  
line break after this because of two spaces -->) _This will also be italic_ **This text will be bold** (there's alternative  
syntax for line break after this parenthesis)\ _This will also be bold_ _You **can** combine them_ {MARKDOWN}
```

*Would produce on this site:*

# This is an h1 tag

# This is an h2 tag

This is an h6 tag

*This text will be italic* (hard line break after this because of two spaces -->)

*This will also be italic*

**This text will be bold** (there's alternative syntax for line break after this parenthesis)

**This will also be bold**

You **can** combine them
