

# TrackerList to List converter

Since Tiki19 there is a tool to convert a PluginTrackerList into a PluginList

1. Enable preference **Plugin trackerlist converter** (wikiplugin\_list\_convert\_trackerlist)
2. Enable edit icons when viewing the page and click the trackerlist jigsaw piece
3. On the bottom of the modal form hit the **Convert to List** button

That's it!!!

Some notes:

- while this tool is very comprehensive and converts the vast majority of the PluginTrackerList parameters, a few are still being worked on. Those that did not convert will be listed below the newly created PluginList
- if you have just updated/upgraded your site, keep in mind, it is important to 'Re-Index' your site (found in Settings > Control Panels > Search) so that new features are displayed as options.
