

# RPM Install

This is an installation guide.

You can find all available Tiki releases from the Download page if you do not find your version here.

## Mandriva

Browse the Mandriva RPM repository to find your Tiki version.

Tiki RPM

Mapserver-php RPM for TikiMap

tikiwiki-mapdata RPM for TikiMap

After the installation of the RPM, point your browser to

<http://127.0.0.1/tikiwiki-/tiki-install.php>

to complete the installation. Read InstallTikiDoc from create a MySQL database.

You may want to create a symlink from tiki to tikiwiki-:

```
ln -s tikiwiki- tiki
```

# RedHat

# Fedora

# Fedora CoreÂ 3

The tricky part, is to install the MySQL 4.1.

First, we start from a clean Fedora installation (with http server, and without Mysql). Update the system with up2date

```
[root@fedoraC3 ~] up2date -uv
```

Question: that can't be all? 1. where can I download the rpm for fedora from? Could someone link that here perhaps?
