IPS API	Enable shipping rate calculation using the UPS carrier.	Disable
IPS access key		None
IPS username	UPS credentials	None
IPS password	UPS credentials	None
Custom shipping provider	☷ None   Custom Shipping Example	None

## Shipping Overview

Basic integration with carrier APIs. At this time, this is mostly a developer feature (see dev site Shipping). Supported carriers:

- $\cdot$  FedEx
- UPS
- See: http://sourceforge.net/p/tikiwiki/code/HEAD/tree/trunk/lib/shipping/

## FedEx

To use the FedEx carrier, you must obtain an API key for your account. The FedEx API requires a certification of the application. For the features included in Tiki, the *Standard Certification* is required. Luckily, for this level of certification, one can *Self-certify*, meaning you only have to apply for it.

- Obtain a test key or
- Obtain a production key. Only request the key for *FedEx Web Services for Shipping*.
