Formatted Tooltip

Tiki has a built-in class (called *tikihelp*) that allows you to create a formatted tooltip for a link as follows:
The following syntax:

{HTML()}Home Page{HTML}

Would produce on this site:
Home Page

Mouse over the above link to see the formatted tooltip. Here's what's important for the tooltip to appear like this:

- JQuery must be enabled
- Set class="tikihelp"
- First part of the title before the colon is the heading of the tooltip and the text after the colon is the body.
