

User Files

Overview

This section is used to let users upload files and store them in their tiki personal space, they can then download the files.

To access

Click the **Webmail** icon  on the Admin Panel

or

Access **<http://example.org/tiki-admin.php?page=userfiles>**

Note

This feature is created by the Communities Profile - you may need to load Communities before you can turn on and administer this feature.

The screenshot shows a settings form titled "Settings" for "User Files". It contains three rows of configuration options: "Quota (Mb)" with a text input field containing "30"; "Use database to store userfiles:" with a radio button that is selected; and "Use a directory to store userfiles:" with a radio button and a text input field labeled "Path:". Below the form is a blue button labeled "Change preferences".

User Files

Setting	Description	Default
Settings		
Quota (Mb):	Maximum per user storage capacity	
Use database to store userfiles:	MySQL database is used to store the files. This will be necessary if your host does not support file storage, but if there are many users there could be a performance impact	
Use a directory to store userfiles:	Store files directly in a host directory. Gives better performance than the database option, but you will need to backup that directory separately	
Path:	Relative or absolute path to the User Files storage directory	

Note

The remaining content needs to be moved to the User section of the Tiki User Files section of the User or

User Files

This feature is used to let users upload files and store them in their tiki personal space, they can then download the files.

The screenshot displays the 'User Files' interface. At the top, there is a quota bar showing 15% usage. Below the bar is a 'delete' button. A table lists the files with columns for 'name', 'created', and 'size'. Below the table, there is a 'Page: 1/1' indicator and a '1' link. The 'Upload file' section includes a text input field, a 'Navega...' button, and an 'upload' button.

	name	created	size
<input type="checkbox"/>	 stsi_h2.gif	Tue 29 de May, 2007 17:22 CET	26.35 Kb
<input type="checkbox"/>	 res_ftic206.pdf	Tue 29 de May, 2007 17:22 CET	129.85 Kb

The screen is very simple users can upload files, download them and delete them as they want. The quota and where files are stored can be configured from the userfiles section of the admin menu illustrated below:

Configuring userfiles

The screenshot shows a configuration window titled "User files" with a help icon. It contains the following fields and options:

- Quota (Mb):** A text input field containing the value "1".
- Use database to store userfiles:** A radio button that is currently unselected.
- Use a directory to store userfiles:** A radio button that is currently selected, followed by the label "Path:".
- Path:** A text input field containing the value "/home/groups/uniwiki/user_files/".
- Change preferences:** A button located at the bottom center of the form.

As you can see you can setup the quota in Mbs for each user and decide where to store user files, either the database or a directory. The path can be absolute or relative to the tiki directory, and must have a trailing slash. Example files/
