# Configuration

- you might need to set Admin Home / Users & Community / User Settings / User Preferences Screen enabled
- the tracker must have a user field of type User Selector that will give the user name.
- it must also have the User preference field of type User Preference Field to take user preferences as setup in Edit Options user preference (password, realName, avatar, etc.

# How to find out which preferences can be used?

(the result shown below is from a Tiki22)

MariaDB [xxx_tiki22]> select distinct prefName from tiki_user_preferences order by prefName; +----------------------

# Note

As of Tiki 16.x, while you can use some field like country and user_information, they show up just as text fields and don't provide a drop down.
