

Web Services

Since Tiki3, there is a new PluginWebservice to manage web services, and an admin panel to set up the feature.

Usage

See the following video for an introduction of Tiki webservices in Tiki3

Admin interface

Webservice Registration

Discover and register web services to allow direct use in wiki pages.

Enter the URL of a web services returning either JSON or YAML. Parameters can be specified by enclosing a name between percentage signs. For example: %name%. %service% and %template% are reserved keywords and cannot be used.

LOOKUP

How to register a web service

See Webservice Registration

How to use

See PluginWebservice
