

# Module Domain Password

This Module stores personal passwords for other domains securely in Tiki, as part of User Encryption.

## Usage

To use module **Domain Password** in a wiki page:

```
{module module="domain_password" domain="https://tiki.org" use_currentuser="y" can_update="n"
      show_domain_prompt="y"}
```

where: Store personal passwords for other domains securely in Tiki

Go to the source code

*Preferences required:* feature\_user\_encryption

Parameters	Accepted Values	Description	Default	Since
can_update		If "y" the user can update the values, otherwise the display is read-only (y/n). Default: n		
domain		System the credentials apply for. The name must match a defined Password Domain		
show_domain_prompt		If "y" the word "domain" is shown before the domain. Otherwise the domain name takes the full row (y/n). Default: y		
use_currentuser		Use the currently logged-in user. The username is not editable. (y/n) Default: y
