

## AutoLinks

When the AutoLinks option is enabled, Tiki will automatically transform any website or email addresses that you type in a wiki textarea into a clickable hyperlink. It is similar but different to [Hotwords](#).

Use AutoLinks as a shortcut for creating links with Tiki's [Wiki Syntax](#) (that is, using `[http://www.tiki.org]`).

## AutoLink Examples

For example:

- Typing **www.tiki.org** will produce:  
[www.tiki.org](http://www.tiki.org)
- Typing **http://www.tiki.org** will produce:  
<http://www.tiki.org>
- Typing **info@tikiwiki.org** will produce:  
[info at tikiwiki.org](mailto:info@tikiwiki.org)
