

## Contributions by author

This feature is introduced in [Tiki6](#) as an addition to the [History](#) feature. It visualizes the contributions made by different authors over time and displays statistics.

## How to enable

Go to `tiki-admin.php?page=wiki` -> features -> history

The screenshot shows the Tiki Wiki administration interface for the 'History' feature. The page title is 'Since your last visit...' with a date of '2012-04-14' and the message 'Nothing has changed'. The main content area is a settings panel for the 'History' feature. The 'History' section is expanded, showing various options. The 'View page contributions by author' checkbox is checked and highlighted with a red circle. Other visible options include 'Storage' (Store in database selected), 'Dumps', 'Pictures' (checked), 'Use File Galleries to store pictures' (checked), 'Export', 'WikiWords', 'Maximum number of versions' (0), 'Never delete versions younger than' (1 days), 'Display IP address', 'Default diff style' (Side-by-side diff), and 'Record all versions, rather than only when page content or des'.

# How to access

Click "Contributions by author" button next to the other action buttons

Normal table:

r1c1	r1c2	r1c3
r2c1	r2c2	r2c3
r3c1	r3c2	r3c3

{FANCYTABLE()} example:

head one	head two	head three
cell one	cell two	cell three
r2 c1	r2 c2	r2 c3

# Opening the statistics

When clicking on the "Contributions by author" button, this page will be analyzed and the results will be shown. On a page with multiple versions written by a lot of different authors, this will be a resource consuming process.

## Contributions to Testseite (version 6)

Process  Original wiki text  Parsed Text (HTML)  Output text only (No HTML tags) Options  Show statistics  Visualize page changes  Show popups  Escape HTML / Wiki syntax in page changes

Version	Date	User
6	2010-07-20 19:58	ca:rk
5	2010-07-19 15:32	admin
4	2010-07-19 15:32	white:rk
3	2010-07-19 15:31	white:rk
2	2010-07-19 15:30	admin
1	2010-07-19 15:30	admin

## Display options

Using the form at the top of the page, you can choose what will be analyzed and how the output will be shown.

With the **Process** option, you can choose, if you want to analyse the original wiki text, the generated HTML or the output text (with all HTML removed) as the base for your analysis. By default, the generated HTML will be taken.

If you do not want to show the statistics, uncheck the **Show statistics** option. The **Visualize page changes** option allows you to turn off the display of the document with different colors for each author.

By setting the **Show popups** option, you can enable popups appearing when you move the mouse over the text. Those popups show the name of the author who wrote the text and in case of a deleted text, it also shows the author who deleted it.

Setting **Escape HTML / Wiki Syntax in page changes**, will make the HTML or wiki syntax visible in the rendered output.

Finally, you can choose the version of the page up to which the analysis will be done. By default, it is the actual version of the page.

## Statistics

For each author a line is shown in the statistics, counting the words, whitespaces (HTML tags are considered whitespaces), characters (counting Wiki syntax, HTML and spaces as well) and printable characters.

If you do not escape HTML/Wiki Syntax, these tags will be counted but not displayed literally giving a discrepancy between the visible and counted characters.
