Explanation  There exist some Wiki Argument Variables that allow one to use some variables that are part of the tiki current instance. For example {{user}} will display the userid of the current user: . My first idea was to implement the same thing for to display the email id of the current user. It is generally considered a bad idea to insert email addresses into wiki or web pages as spammers can scrape and use them. I believe this is why the idea is frowned upon. So thanks to Jonny's suggestion I came up with the following solution instead.  Method  1. Add the following custom.php to your tiki language directory, mine is in lang/en/ or lang/en-uk/	Need
