

## Installing Tiki in a sub-directory

The idea situation is to install your Tiki instance to serve the root of a domain or sub-domain

- [example.org/tiki-index\\_raw.php](http://example.org/tiki-index_raw.php)
- [wiki.example.org/tiki-index\\_raw.php](http://wiki.example.org/tiki-index_raw.php)

Installing in a sub-directory like this

- [example.org/wiki/tiki-index\\_raw.php](http://example.org/wiki/tiki-index_raw.php)

## Things to watch out for:

- Review your settings for [CalDAV](#) and [CardDAV](#).
