# Integrator Details

# Requirements

1. In php.ini `track_errors` should be `On` to be able to show integration error messages in a convenient way (-+$php_errormsg+- PHP variable used).

   ;Store the last error/warning message in $php_errormsg (boolean). track_errors = On

2. `tiki_p_view_integrator` (see general permissions) needed to view configured repositories
3. `tiki_p_admin_integrator` (see general permissions) needed to configure repositories and rules
