

Example 1:

Example 2:

Create a page called "Menu", and add 4 links to other pages (one of them, called "Instructions"). Then add a link in your homepage to the same page "Instructions". Then, in the homepage, add this syntax:

```
{WIKIGRAPH(level=>1)}Menu{WIKIGRAPH}
```

You will end up seeing something like this:

The screenshot shows a wiki interface. On the left, a graph titled "HomePage" shows a central node "Menu" with arrows pointing to "community", "homepage", and "wiki help". From "homepage", an arrow points to "Instructions". On the right, a "Menu" section contains a list of links: "Instructions", "homepage", "community", and "wiki help". Below this is a red text box: "This is just a sample menu - edit it". Further down, there is a "My account" section with a list of links: "Home Page", "Last changes", "Forums", and "FAQS". At the bottom, a message says "Thank you for installing the Collaborative Community Profile" and recommends visiting the "Instructions" page.
