

Major Slowdown tab

Related Topics

Overview

Use this tab to configure the Tiki options that may affect your overall performance.

- [Plugins](#)
- [Cache](#)
- [Performance](#)
- [Menus](#)

To Access

From the [Performance Admin Panel](#) page, click the **Major Slow Down** tab.

Note

The features on this tab have been reported to lower overall performance, especially in high-volume sites.

Option	Description	Default
Plugin ShareThis	Add a ShareThis button	Disabled
Log SQL	All SQL queries will be registered in the database in the tiki_sql_query_logs table. ⚠ <i>Do not enable this feature all the time. It can be very resource intensive and will impact performance.</i>	Disabled
Log mail in Tiki logs	A line of type mail will be included in the System Log with the destination address and subject of each email sent. ⚠ <i>May impact performance</i>	Disabled
Smarty template usage indicator	Add HTML comment at start and end of each Smarty template (.tpl file) * <i>Clear the Tiki system cache for this change to take effect.</i> 👉 <i>Use only for development, not in production at a live site, because these warnings are added to emails as well, and are visible to users in the page source.</i> ⚠ <i>May impact performance</i>	Disabled
Show category object count	Show object count when browsing categories, complying with search and type filters ⚠ <i>Can slow the loading of the categories page on large sites.</i>	Enabled
Clear cache upon category change	A cache is used to avoid having to fetch all categories from the database every time; this clears the cache when an object is categorized to keep the count up to date. ⚠ <i>Can slow saving objects on sites with a lot of categories. You may need to manually clear caches to update category object counts.</i>	Enabled
Log bytes changes (+/-) in action logs	⚠ <i>May impact performance</i>	Disabled
Parse search results	When enabled search results are parsed so content formatting is visible in the search results ⚠ <i>May impact performance</i>	Enabled
Custom blog headings	⚠ <i>Using custom blog headings will use significantly more server resources. Unless you need per-blog templates, you should customize the template file instead.</i>	Disabled
