Overview

Use this tab to create a new [wiki plugin](#), by using a modified copy of an existing [plugin](#).

- [Wiki Plugin](#)
- [Plugin Alias](#)

To Access

From the [Text Area](#) Admin page, click the **Plugin Aliases** tab.

Note

if applicable

The screenshot shows the 'Text area' admin interface with the 'Plugin Aliases' tab selected. The page includes fields for 'Plugin Name' (set to 'pavillon'), 'Base Plugin' (set to 'tracklist'), 'Name' (empty), 'Description' (empty), 'Body Label' (empty), 'Dependencies' (empty), 'Filter' (set to 'xss'), 'Validation' (set to 'none'), and 'Inline (No Plugin Edit UI)' (unchecked). Below these are sections for 'Simple Plugin Arguments' (with a 'New Argument' field), 'Plugin Parameter Documentation' (with a 'New Argument' field), and 'Plugin Body' (with an 'Ignore User Input' checkbox). At the bottom are sections for 'Default Content', 'Parameters', and 'Composed Plugin Arguments', each with its own 'Parameters' section. A 'Change preferences' button is at the bottom right.

Plugin Aliases tab

Setting	Description	Default
---------	-------------	---------

The screenshot shows the 'Available Alias' configuration page. It features a 'General Information' section with fields for 'Plugin Name' (set to 'pavillon'), 'Base Plugin' (set to 'tracklist'), 'Name' (empty), 'Description' (empty), 'Dependencies' (empty), 'Filter' (set to 'xss'), and 'Validation' (set to 'none'). Below this is a 'Plugin Parameter Documentation' section with a 'Name' field set to 'Pavillon'. Under 'Plugin Body', there is an 'Ignore User Input' checkbox and a 'Default Content' field. The 'Parameters' section contains fields for 'Encoding' (set to 'none'), 'Argument Source (if different)' (set to 'none'), and 'Default Value' (empty). The 'Composed Plugin Arguments' section has a 'Pattern' field and a 'Parameters' section with fields for 'Encoding' (set to 'none'), 'Argument Source (if different)' (set to 'none'), and 'Default Value' (empty). A 'Save' button is at the bottom left.
