

# Parameters

Create a formatted box with a title bar  
*Introduced in Tiki 1.*  
[Go to the source code](#)  
*Preferences required:* wikiplugin\_box

| Parameters       | Accepted Values          | Description                                                                                                                                                             | Default | Since |
|------------------|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| (body of plugin) |                          | text                                                                                                                                                                    |         |       |
| width            | text                     | In pixels or percentage. Default value is 100%.                                                                                                                         |         | 1     |
| bg               |                          | As defined by CSS, name, or color hex code.                                                                                                                             |         | 1     |
| title            | text                     | Displayed above the content                                                                                                                                             |         | 1     |
| style            | text                     | Enter CSS styling tags for the div type used e.g. padding: 5px                                                                                                          |         | 13.0  |
| id               | text                     | ID                                                                                                                                                                      |         | 1     |
| class            |                          | Apply custom CSS class to the box.                                                                                                                                      |         | 1     |
| clear            | (blank)<br>1<br>0        | Text, etc. is not allowed to wrap around the box if this parameter is set to 1 (Yes)                                                                                    |         | 1     |
| float            | (blank)<br>left<br>right | Set the alignment for the entire box. For elements with a width of less than 100%, other elements will wrap around it unless the clear parameter is appropriately set.) |         | 1     |
| align            | left<br>right<br>center  | Aligns the text within the box (left-aligned by default)                                                                                                                | left    | 1     |

# Examples

## No options

*This code:*

```
{BOX()} A whole lot a shakin goin on {BOX}
```

*Would produce:*

A whole lot a shakin goin on

## Title only

*This code:*

```
{BOX(title="Tiki Rocks")} A whole lot a shakin goin on {BOX}
```

*Would produce:*

Tiki Rocks

A whole lot a shakin goin on

## Title and background color

*This code:*

```
{BOX(title="Tiki Rocks" bg="#CCCCCC")} A whole lot a shakin goin on {BOX}
```

*Would produce:*

Tiki Rocks

A whole lot a shakin goin on

## Title, background color, and width

*This code:*

```
{BOX(title="Tiki Rocks" bg="#CCCCCC" width="90%")} A whole lot a shakin goin on {BOX}
```

*Would produce:*

Tiki Rocks

A whole lot a shakin goin on

## Step by step instructions for beginners

To use the BOX plugin, do the following:

1. Place the insertion point on a blank line.
2. Define the box and the options you want (title, background color, and/or width ) by following these examples:
  1. Title: `{BOX(title="Title")}`
  2. Background color: `{BOX(bg="#CCCCCC")}`
  3. Width in pixels: `{BOX(width="256")}`
  4. Width in percentage: `{BOX(width="75%")}`
  5. All options: `{BOX(title="Title" bg="#CCCCCC" width="75%)}`
3. Type the text you would like to place within the box, and press **Enter**.
4. Type `{BOX}`

## Help!

Did something go wrong?

- Double-check your typing to make sure you have included all the necessary curly braces, commas, and parentheses.
- If you're sure you typed the plugin syntax correctly, ask your administrator whether the BOX plugin is enabled.
