

## Plugin LS Dir

Use this [wiki plugin](#) to list files in a directory. LS comes from the shell command `ls` for listing file information. See also [PluginLocalFiles](#).

## Parameters

List files in a directory

Introduced in Tiki 1. Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: `wikiplugin_lsdir`

Parameters	Accepted Values	Description	Default	Since
<b>dir</b>		Full path to the server-local directory. Default is the document root.		1
<b>filter</b>		Only list files with file names that contain this filter. Example: <code>.jpg</code>		1
<b>limit</b>	digits	Maximum amount of files to display. Default is no limit.	0	1
<b>urlprefix</b>	url	Make the file name a link to the file by adding the URL path preceding the file name. Example: <code>http://yoursite.com/tiki/</code>		1
<b>sort</b>	(blank) name size atime ctime mtime	Set the sort order of the file list	name	1

## Example

```
{lsdir dir="/lib/" urlprefix="http://localhost" sort="name" filter=".php" limit="5"}
```
