

PluginPeerTube

This [wiki plugin](#) embeds a PeerTube video in a Tiki page.
It uses PeerTube’s oEmbed under the hood but exposes familiar Tiki parameters.
Available since Tiki 30.x.

Parameters

Embed a PeerTube video (uses oEmbed under the hood).
*Introduced in Tiki 30.x. Required parameters are in **bold**.*
[Go to the source code](#)
Required preferences: `wikiplugin_peertube` and `feature_peertube`.

Parameter	Accepted values	Description	Default	Since
url	url	Full watch URL of the PeerTube video (e.g., https://videos.example.com/w/abc123xyz)		Tiki 30.x
height	digits	Height in pixels (e.g., 315). Leave empty to use provider dimensions		Tiki 30.x
width	digits	Width in pixels (e.g., 560). Leave empty to use provider dimensions		Tiki 30.x
start	digits	Start time offset in seconds	0	Tiki 30.x
privacyEnhanced	y / n	Enable “privacy-enhanced” mode (if supported by the provider)		Tiki 30.x
bg	text	Container background color. Examples: <code>#ffffff</code> , <code>rgb(255,255,255)</code> , <code>white</code>		Tiki 30.x
allowFullScreen	y / n	Allow full-screen playback	y	Tiki 30.x
borderRadius	y / n	Apply rounded corners to the container	y	Tiki 30.x
border	text	Container border color. Examples: <code>#ffffff</code> , <code>rgb(255,255,255)</code> , <code>white</code>		Tiki 30.x

Show a video

Examples of using the PeerTube plugin:

Minimal

```
{peertube url="https://videos.example.com/w/abc123xyz"}
```

With display options

```
{peertube url="https://videos.example.com/w/abc123xyz" width="560" height="315" allowFullScreen="y" bg="#000000" border="#ff0000" borderRadius="y" start="30" }
```

Important notes

- Always use the full watch URL (the .../w/shortUUID form).
- Private/Internal videos may not embed due to instance privacy policy.
- If width/-+height+- are empty, Tiki uses the default responsive dimensions returned by oEmbed.
- bg, border, and borderRadius style the container (not the remote player UI).

Known limitations

- No automatic oEmbed discovery: you must provide a valid PeerTube watch URL.
- Works if the PeerTube instance exposes an oEmbed endpoint and allows iframe embedding.

To do (ideas)

- Add smarter URL discovery.
- Regularly test against multiple PeerTube instances/versions.
