

Search Stats

If you enabled the [Search](#) feature, you can also enable the search statistics at "Admin home > Search > Search features > Search stats".

The screenshot shows the 'Search Results' configuration page in Tiki Admin. It is divided into three sections: 'Search type', 'Features', and 'Permissions'. In the 'Features' section, the 'Search stats' checkbox is checked and circled in red. Below it, there is a note: 'Unless you have a reason to, you should use MySQL Full-Text Search feature instead.' The 'Permissions' section contains a warning: 'Enabling these options will improve performance, but may show forbidden results.' and two unchecked checkboxes: 'Ignore individual object permissions' and 'Ignore category viewing restrictions'.

Then, you can access them under "Admin > Search stats", which will lead you to "[tiki-search_stats.php](#)":

The screenshot shows the 'Search stats' page. At the top, there is a 'clear stats' link and a search bar with a 'find' button. Below the search bar is a table with two columns: 'term' and 'searched'. The table contains the following data:

term	searched
	11828
search	5293
for...	4236
wiki	3245
page	2866
table	2591

This page should be edited and inserted into the Search section of the Tiki Admin Guide
