UPS username	UPS credentials	None
UPS password	UPS credentials	None
Custom shipping provider	☰ None	Custom Shipping Example	None

Shipping Overview

Basic integration with carrier APIs. At this time, this is mostly a developer feature (see dev site Shipping).

Supported carriers:

- FedEx
- UPS
- See: http://sourceforge.net/p/tikiwiki/code/HEAD/tree/trunk/lib/shipping/

FedEx

To use the FedEx carrier, you must obtain an API key for your account. The FedEx API requires a certification of the application. For the features included in Tiki, the *Standard Certification* is required. Luckily, for this level of certification, one can *Self-certify*, meaning you only have to apply for it.

- Obtain a test key or
- Obtain a production key. Only request the key for *FedEx Web Services for Shipping*.
