

## Stars Tracker field

Started in [Tiki5](#)

The field works like the tracker [rating](#) but as a field, you can have multiple stars fields in a tracker and you can choose the name and the placement in the table....

The option of the fields is a list (comma separated) of integers. The list must be from the smallest integer to the highest.

Note:

The values of the fields are saved in the database. So if you change the options of the field, the items rating will not be changed.
