

Tracker Inline edit

There is a new feature since [Tiki11](#) in Trackers to allow Inline editing of items (using `ajax_inline_edit`), from the list of displayed items.

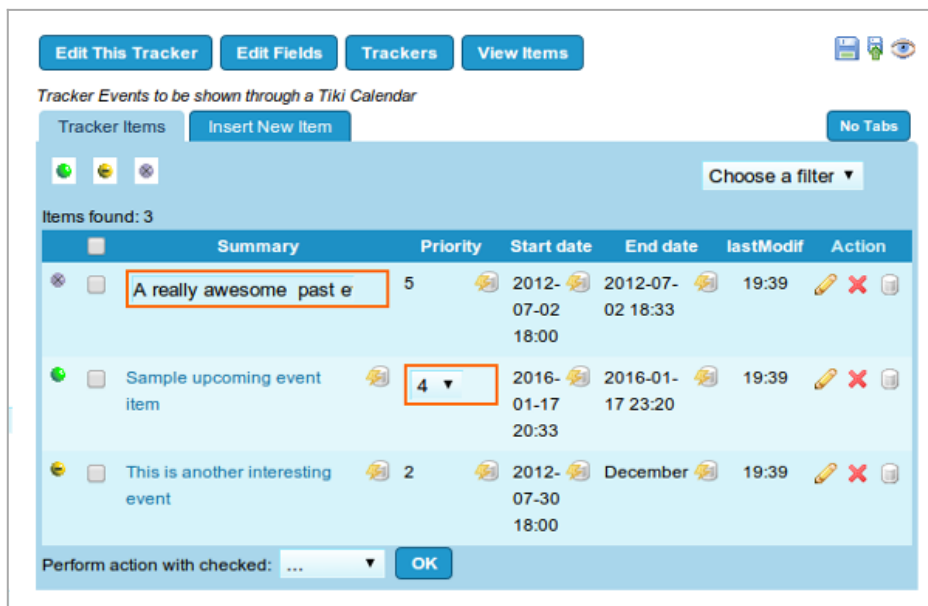

You can enable it at **Admin home > Trackers > Configuration (tab) > Inline editing > Tracker list inline editing**

Once enabled, you can

- edit items from the tracker items list (using the tracker feature itself)
- use some new params in [PluginTrackerList](#) and [PluginTrackerFilter](#), to allow some displayed fields to be editable.

Param "**editable**", with the list of fields to be editable, or the whole list of displayed items, with param "**editableall=y**"

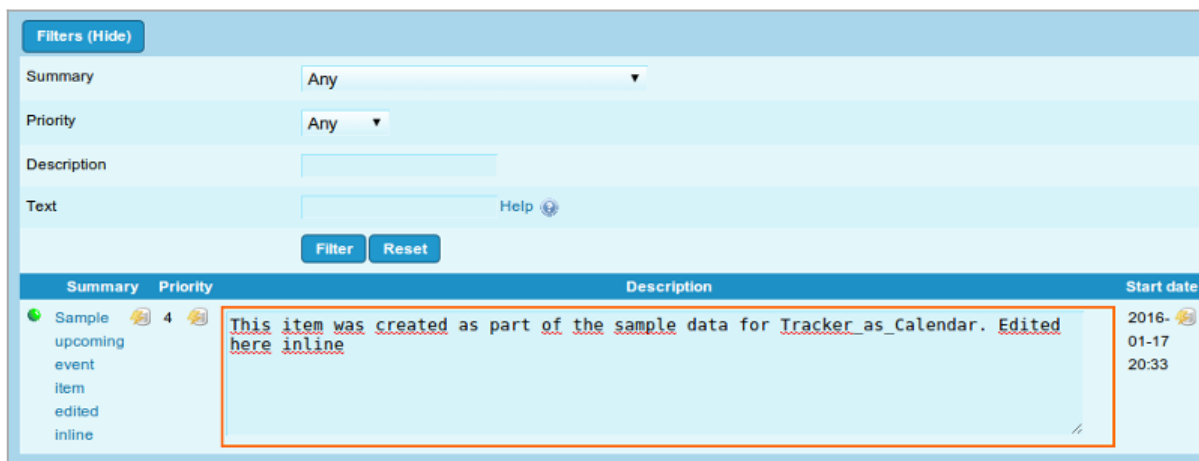

You will see this icon  next to each value that can be edited inline.

The screenshot shows the Tracker interface with a table of items. The first item, "A really awesome past e", has its description field highlighted with an orange box. The second item, "Sample upcoming event item", has its priority field highlighted with an orange box. The third item, "This is another interesting event", has its description field highlighted with an orange box. The table has columns: Summary, Priority, Start date, End date, lastModif, and Action. The Action column contains icons for edit, delete, and print. The interface also includes buttons for "Edit This Tracker", "Edit Fields", "Trackers", "View Items", "Tracker Items", "Insert New Item", "No Tabs", and "Choose a filter".

A similar behavior happens with the results from [PluginTrackerList](#) or [PluginTrackerFilter](#) :

The screenshot shows the Tracker interface with a table of items. The first item, "Sample upcoming event item", has its description field highlighted with an orange box. The table has columns: Summary, Priority, Description, and Start date. The Description column contains the text "This item was created as part of the sample data for Tracker as_Calendar. Edited here inline". The interface also includes buttons for "Filter" and "Reset".
