

Upgrade 1.9.x to 1.9.y

or

Upgrade 1.8.x to 1.9.y

[Needs review](#)

This page explains steps to upgrade any TikiWiki installation of the 1.8.x branch (1.8.0, 1.8.1, 1.8.2, ...) **or** 1.9.x branch (1.9.0, 1.9.1, 1.9.2, ...) to the latest version of the stable 1.9.x branch.

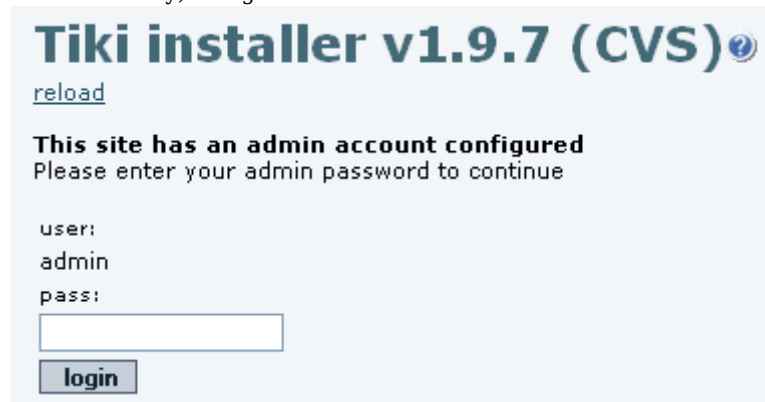

First [Backup](#) whole Filesystem and Database

Upgrade:

Download the [tar-ball from sourceforge](#) and transfer it to your server. We assume that you have not changed any tikiwiki-files (php, tpl, ... -files); if you have, then make a backup of your modified files, to put them back to your installation after the basic upgrade is performed.

Very strange bug in the upgrade script, affecting Internet Explorer (IE). Please use Firefox and not IE to upgrade your TikiWiki to 1.9.7. If you want to use IE, please replace your templates/tiki-install.tpl with [this one](#). For more details, please see [Revision 1.34.2.47](#)

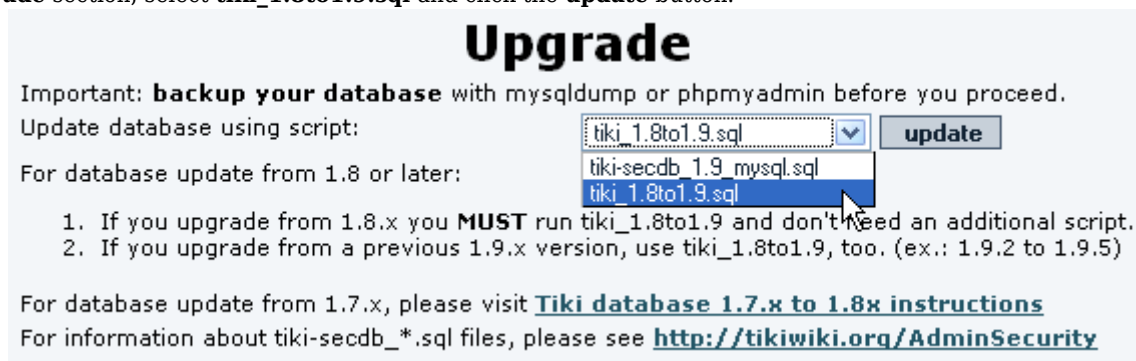

1. Untar it somewhere
(windows users might like to use the free software program [7-zip](#), translated to many languages, for decompressing any of those file formats)
2. copy it over your existing tikiwiki source (replace files)
3. Run **tiki-install.php** (or **tiki-install.php?lang=XX** to have the installation messages in a **language** other than English, if it has been translated already) to login as admin

After that, you will see the main install & upgrade screen

4. In **Upgrade** section, select **tiki_1.8to1.9.sql** and click the **update** button.

5. Click on "**Do nothing and enter Tiki**", at the bottom of the page

For database update from 1.8 or later:

1. If you upgrade from 1.8.x you **MUST**
2. If you upgrade from a previous 1.9.x

For database update from 1.7.x, please visit
For information about tiki-secdb_*.sql files, p

[Do nothing and enter Tiki](#)
[Reset database connection settings](#)

6. log into the tikiwiki as admin and check the preferences

7. done!
