Module translation

This is the module used for the http://wiki-translation.com/Cross+Lingual+Wiki+Engine+Project

This is not the same as Multilingual module

Parameters

Links to versions of the wiki page being viewed in other languages, distinguishing between better, equivalent or worse translations. Optionally displays the up-to-dateness of the translation being viewed.

Go to the source code
Preferences required: feature_multilingual

Parameters	Accepted Values	Description	Default	Since
`pivot_language`		If set to a language code, restricts the localized pages shown to the reference page, unless that page is being displayed. Example values: en, fr. Not set by default.		
`show_language`		If "y" the page language will be shown instead of the page name.Default = "y".
