Unique Meta Title and Meta Description

Posted by [hetulk] Sat 29 Sep, 2007 07:11 GMT-0000 posts: 2 🚫

HI,

I would like to know how to create Wiki Page specific Meta Title, Meta Description and Meta Keywords tags?

Currently, we use the $description of the WIKI page to appear in the page title...

however, we would like to have proper meta description that can be defined as per the wiki page.

I need to know if it was possible to duplicate the Description box that appears on the wikipage. If so, we can make a couple of such additional boxes to enter meta description and keyword.

and then configure the header.tpl file such that it would display them respectively.

Any thoughts on this?
